

**METHOD FOR GENERATING TRANSCRIPTIONALLY ACTIVE DNA  
FRAGMENTS**

Abstract of the Disclosure

5 A method for producing transcriptionally active DNA molecules, comprising  
(PCR) amplification of said DNA molecule in the presence of a first DNA fragment  
(F1), second DNA fragment (F2), first primer (P1), a second primer (P2), a third primer  
(P3), and a fourth primer (P4) wherein: F1 comprises a promoter sequence; F2  
comprises a terminator sequence; P1 is complementary to the 5' end of F1; P2 is  
complementary to the 5' end of F2; P3 comprises a first region complementary to the 3'  
10 end of F1 and a second region complementary to the 5' end of said DNA molecule; P4  
comprises a first region complementary to the 3' end of F2 and a second region  
complementary to the 3' end of said DNA molecule.
